SQL SERVER (2014)

The core component of Microsoft SQL Server is the SQL Server Database Engine, which controls data storage, processing and security. It includes a relational engine that processes commands and queries, and a storage engine that manages database files, tables, pages, indexes, data buffers and transactions.

It can be used to visually observe and analyze query plans and optimize the database performance, among others. SQL Server Management Studio can also be used to create a new database, alter any existing database schema by adding or modifying tables and indexes, or analyze performance.

Microsoft SQL Server 2014 Express is a powerful and reliable free data management system that delivers applications.

ASP.NET (2015)

ASP.NET is an open-source server-side web application framework designed for web development to produce dynamic web pages. It was developed by Microsoft to allow programmers to build dynamic web sites, web applications and web services

.Other app models are offered by alternative implementations of the .NET Framework. Console and ASP.NET Core are available on .NET Core. Mono is used to power Xamarin app models for Android, iOS, and macOS.

Because ASP.NET 5 will not only run on .NET Framework 4.6, which was released today, but also on the .NET Core Framework that will support Windows, Mac, and Linux, ASP.NET 5 isn't released today. The ASP.NET 5 roadmap is up on GitHub though.

ASP.NET (not core) is dead ?
Stephen Bilik. Wednesday, 20 January 2016 15:54:16 UTC.
Great news!! Maybe its time also to change the name of Visual Studio to VS.NET Core instead of the 2013 and 2015.

Microsoft®
Visual Studio®
